So, they are also called "monitoring gauges". Transmission Inclined bellows are used to transmit engine oil and engine lubrication. There are two inclined bellows located at the side of the gearbox: From the gearbox, oil is transmitted to the engine oil circuit, through the inclined bellows in the transmission case. He participated in seven races, driving the four wheel drive Volvo 850 T5. He finished 18th in the championship. Pressacco is the cousin of former Formula One world champion Michele Alboreto. Complete WTCC results (key) (Races in bold indicate pole position; races in italics indicate fastest lap) Category:1959 births Category:Living people Category:Italian racing drivers Category:World Touring Car Championship driversQ: how to make a share links in multiple languages on android I want to make a android application which should be in multiple languages (eg:English and Hindi),I searched for it a lot and got some tutorials but i cant understand those. I have also created a webservice which is there to share the links of any websites in different languages. Is it possible to use a webservice to generate that links? and if it is possible to make a android application which can detect what language the phone is and show the links to share in the language I prefer? A: Have you ever seen the Share UI of Android? It has a lot of different languages supported by Google and depending on the language you are, you can have different UI for the same share intent. Now, once you have created a share intent, you can then filter the activity where you want the share to be. You can do this by using ActivityInfo.RESULT_FILTER. If you have a list of activities for each languages that you want to support, then you can iterate through that list and create share intents for each languages and then filter the result of that. You can then create a intent that will invoke that activities. Here is a good tutorial for sharing intent: 82157476af
